L'application smartphone connectée à Joomla!

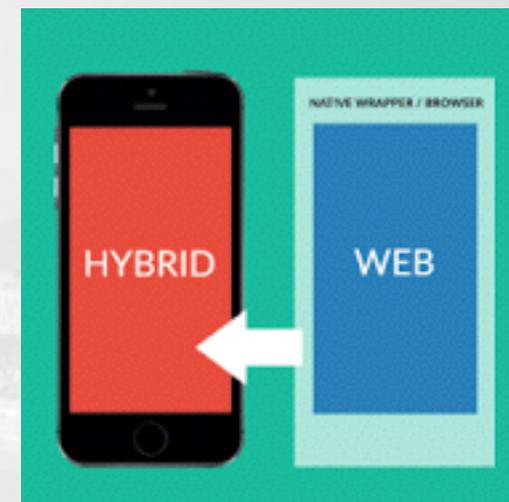

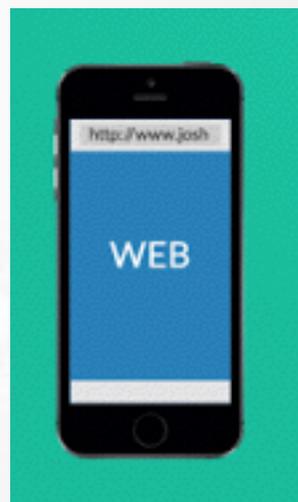

Par Yann Gomiero

Usage sur smartphone : 14% pour naviguer / 86% sur Application

Présentation / Pourquoi une application ?

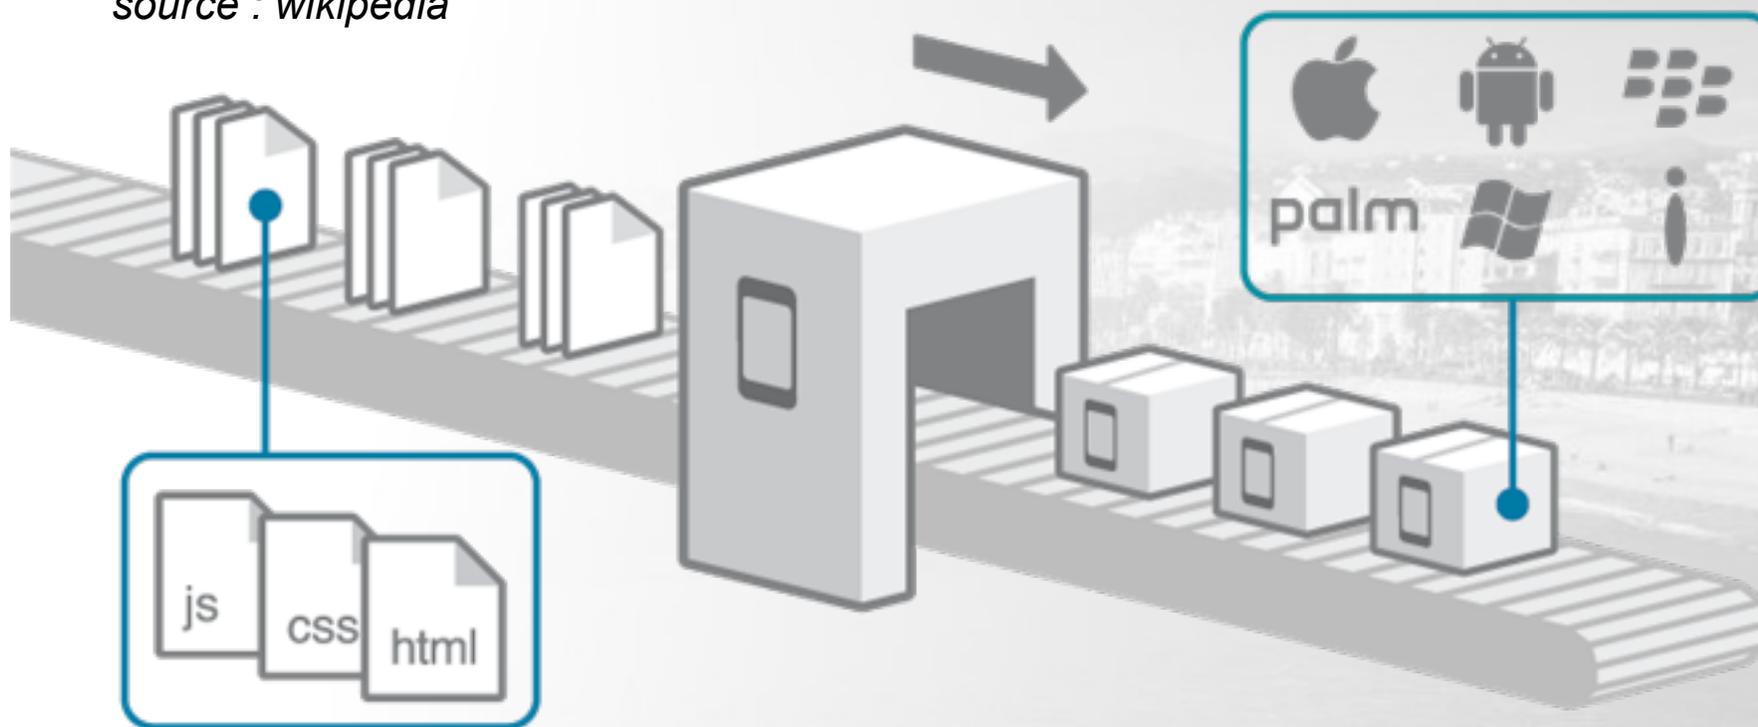

3 types d'application : NATIVE - WEB - HYBRIDE

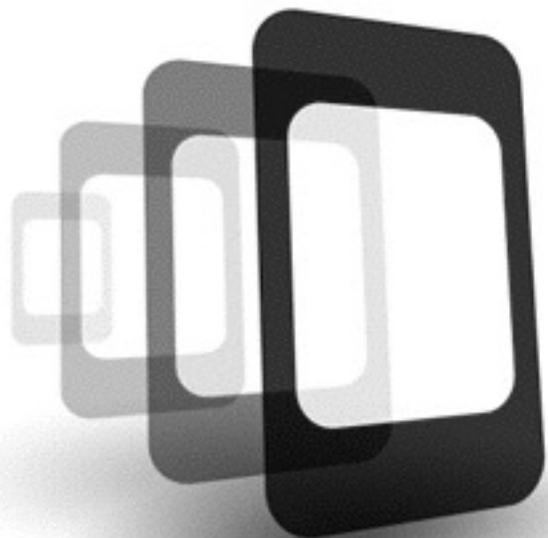

PhoneGap et Cordova

Apache Cordova ou plus anciennement Apache Callback ou PhoneGap, est un framework open-source développé par la Fondation Apache. Il permet de créer des applications pour différentes plateformes (Android, Firefox OS, iOS, Ubuntu, Windows 8...) en HTML, CSS et JavaScript.

source : wikipedia

PhoneGap

HTML5

Accelerometer
Camera
Capture
Compass
File

CSS 3

Connection
Contacts
Device
Events

JavaScript

Geolocation
Media
Notification
Storage

Installation des pre-requis

<https://nodejs.org/>

Pour ANDROID

Android SDK & « ant build tool »

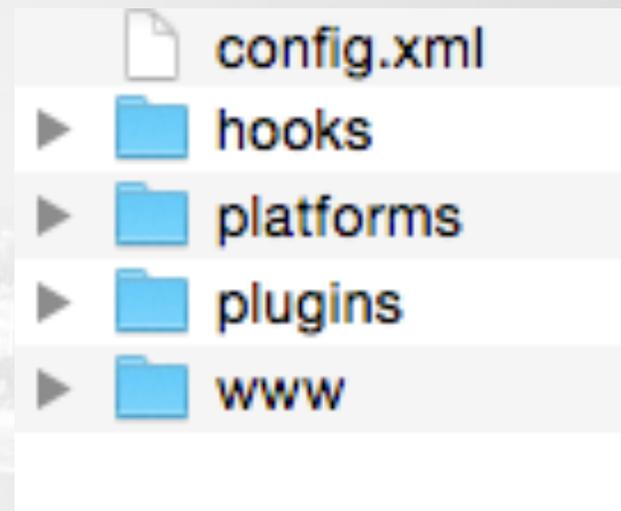

Pour IOS (Iphone, ipad...)

Un mac ! et une licence développeur

Création d'une application en 2 lignes de commande

```
cordova create dossier com.votreappli.nom Nomapplication && cd dossier
```

```
cordova platform add ios android
```

Tester en émulation (déconseillé)

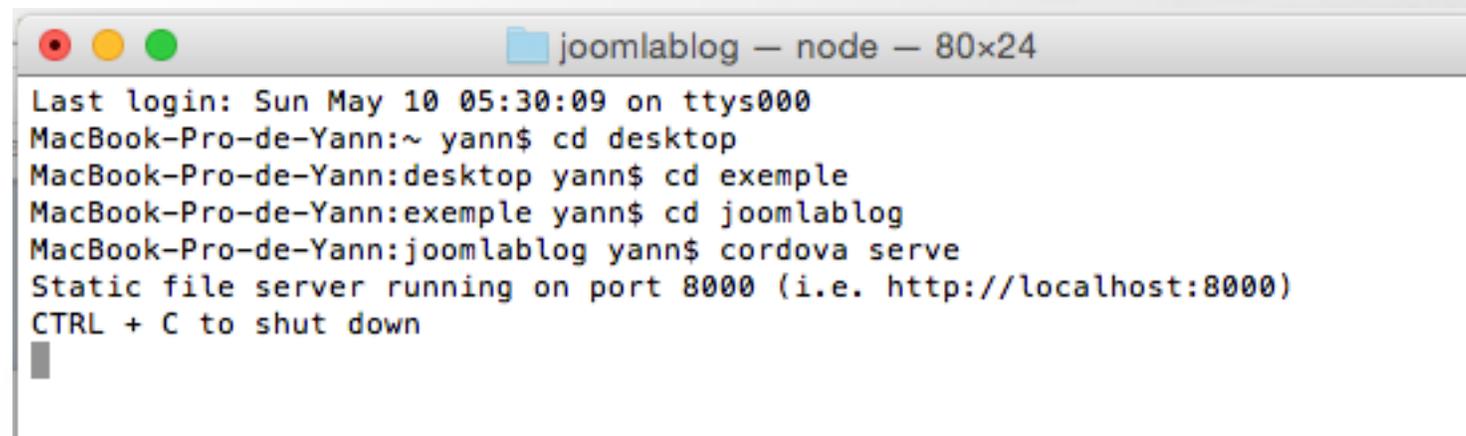

```
cordova emulate
```

Générer l'application Android non signé

`cordova build android --release`

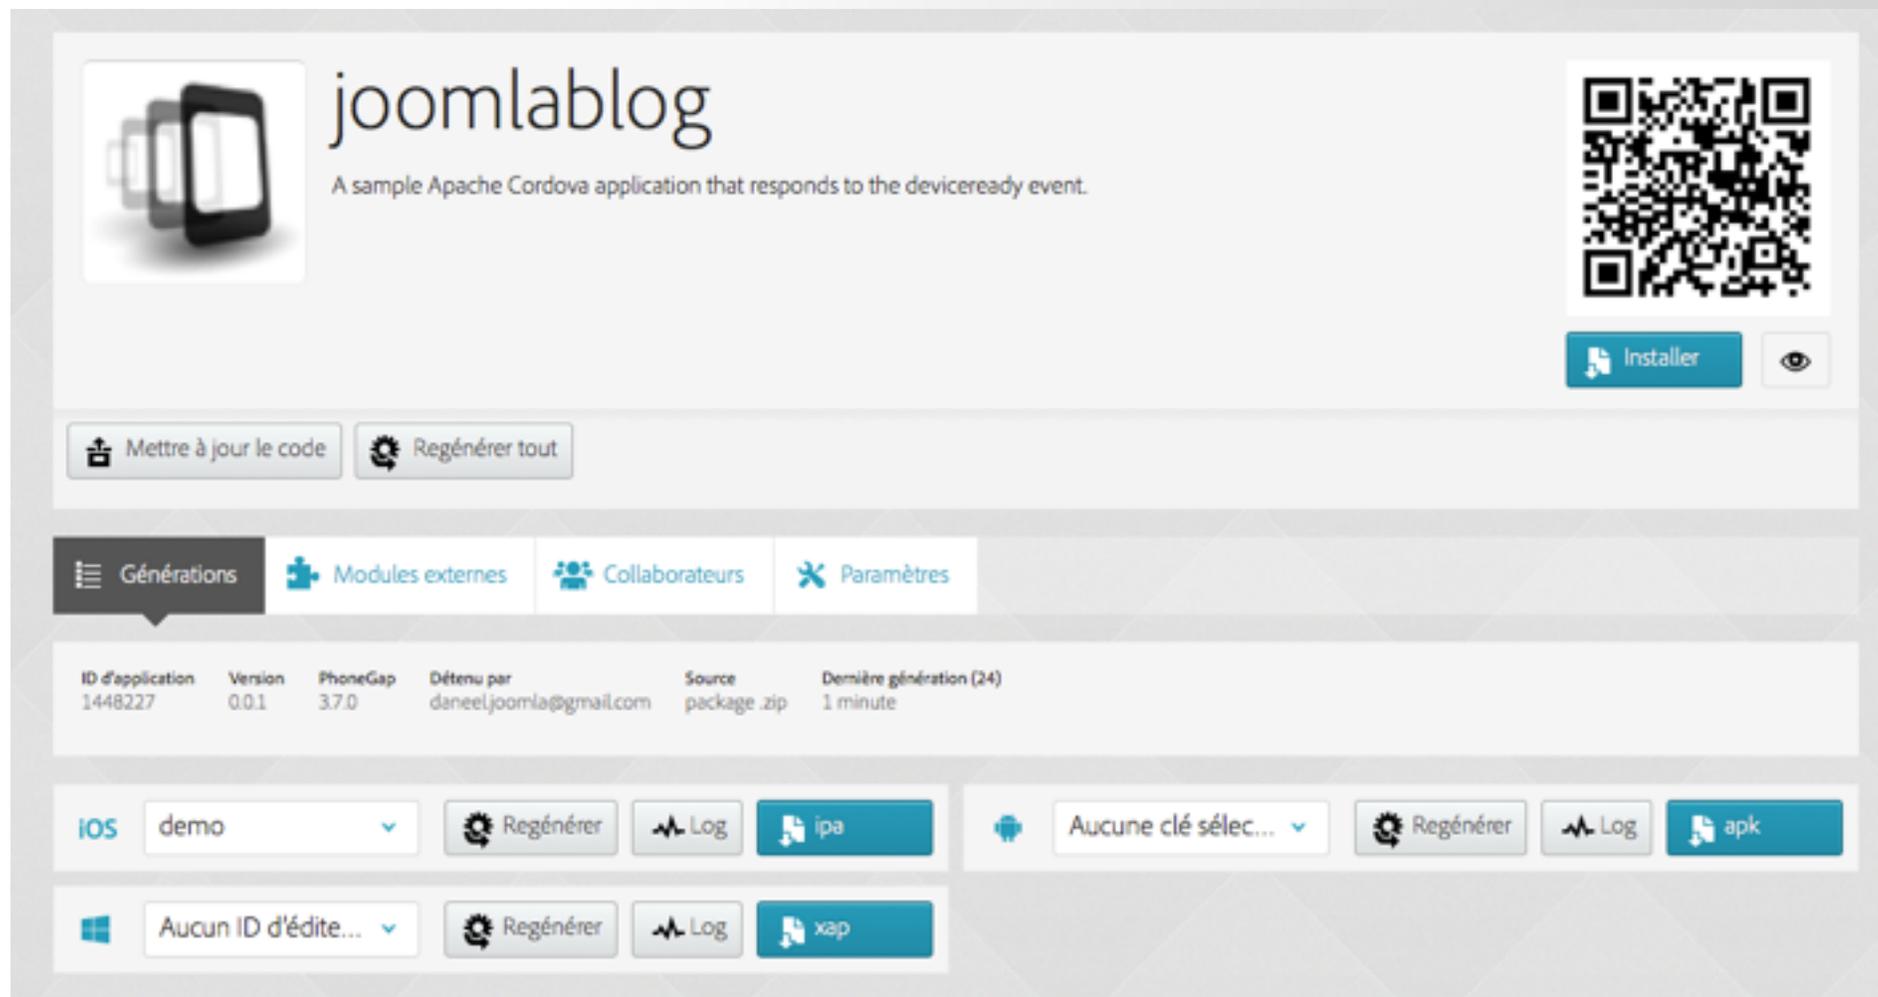

ou Tester via l'application cordova (android ou iOS)

`cordova serve`

A terminal window titled 'joomlablog — node — 80x24' showing the following text:

```
Last login: Sun May 10 05:30:09 on ttys000
MacBook-Pro-de-Yann:~ yann$ cd desktop
MacBook-Pro-de-Yann:desktop yann$ cd exemple
MacBook-Pro-de-Yann:exemple yann$ cd joomlablog
MacBook-Pro-de-Yann:joomlablog yann$ cordova serve
Static file server running on port 8000 (i.e. http://localhost:8000)
CTRL + C to shut down
```

Générer l'application via build.phonegap.com

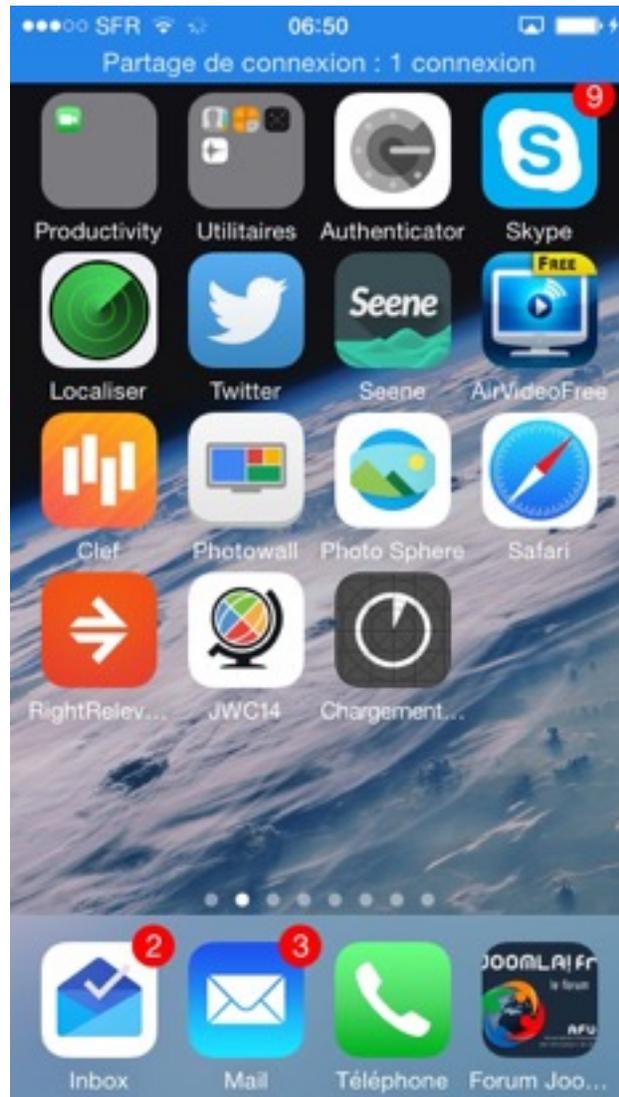

The screenshot shows the build.phonegap.com interface for an application named "joomlablog". The application is described as "A sample Apache Cordova application that responds to the deviceready event." A QR code is visible in the top right corner, and an "Installer" button is located below it. The interface includes a navigation menu with options: "Génération", "Modules externes", "Collaborateurs", and "Paramètres". Below the menu, a table displays application details:

ID d'application	Version	PhoneGap	Développé par	Source	Dernière génération (24)
1448227	0.01	3.7.0	daneeljoomla@gmail.com	package .zip	1 minute

At the bottom, there are three rows of controls for different platforms:

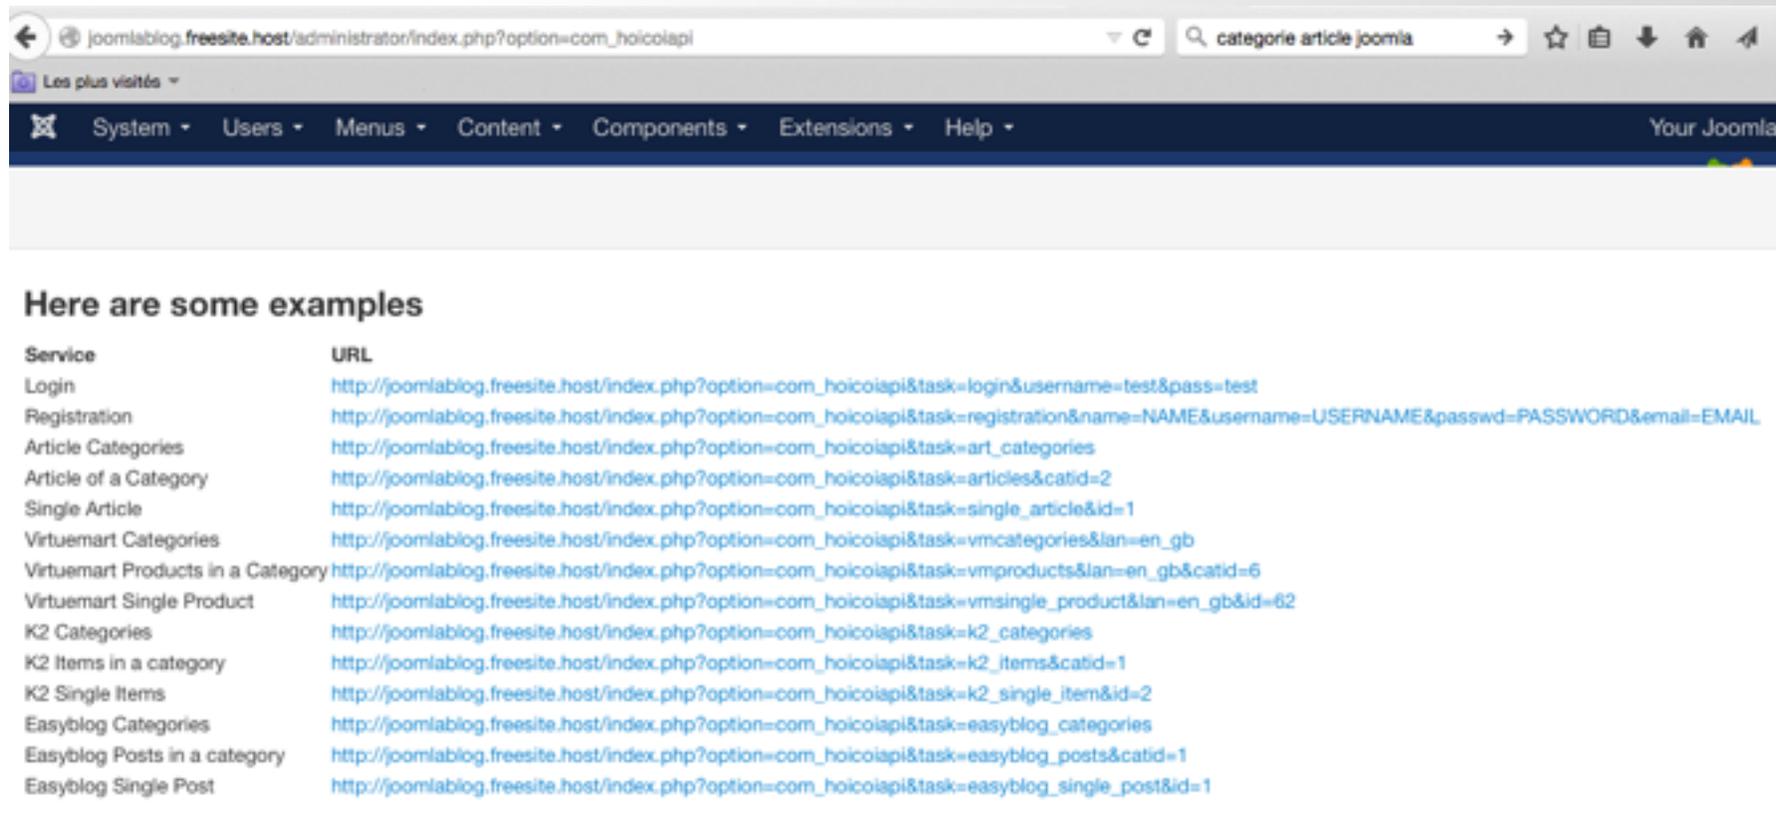

- iOS**: dropdown menu set to "demo", buttons for "Regénérer", "Log", and "ipa".
- Android**: dropdown menu set to "Aucune clé sélec...", buttons for "Regénérer", "Log", and "apk".
- Windows**: dropdown menu set to "Aucun ID d'édi...", buttons for "Regénérer", "Log", and "xap".

Installation directe sur smartphone et tablette

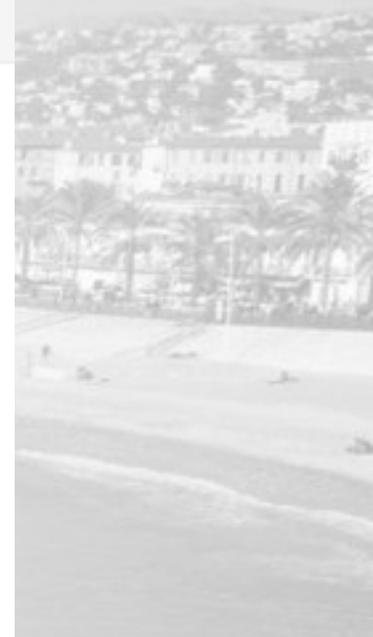

Joomla API for mobile apps : hoicoiapi

https://github.com/jibon57/Joomla_API

The screenshot shows the Joomla! administrator interface. The browser address bar displays the URL: `joomlablog.freesite.host/administrator/index.php?option=com_hoicoiapi`. The search bar contains the text "categorie article joomla". The navigation menu includes "System", "Users", "Menus", "Content", "Components", "Extensions", and "Help". The main content area is titled "Here are some examples" and contains a table of API services and their corresponding URLs.

Service	URL
Login	http://joomlablog.freesite.host/index.php?option=com_hoicoiapi&task=login&username=test&pass=test
Registration	http://joomlablog.freesite.host/index.php?option=com_hoicoiapi&task=registration&name=NAME&username=USERNAME&passwd=PASSWORD&email=EMAIL
